Ahmed Ali

CS Student @ FAST-NUCES | Backend Development & AI Engineering | Building Scalable APIs, LLM Applications & Intelligent AI Agents

Karachi Division, Sindh, Pakistan

Summary

My journey into programming started in my first semester at FAST-NUCES, where I learned fundamentals of programing and through it get really intrested in game development especially using Unreal Engine. What began as an interest in creating games gradually turned into a deeper curiosity about how software works behind the scenes.By my second semester, my interests had shifted towards software engineering, database systems, and application design. I started exploring how different components come together to build complete applications and eventually developed a full-fledged application with an integrated game, which introduced me to the bigger picture of software development.From there, I became increasingly interested in what happens beyond writing code — designing APIs, building backend systems, working with databases, deploying applications to the cloud learning about cloud platforms like Aws, and understanding how to make systems scalable and reliable.That curiosity eventually led me towards Artificial Intelligence. I started exploring LLMs, understanding how they work, experimenting with RAG pipelines, and building applications around them.Today, I'm particularly interested in AI workflows, agentic architectures, and building intelligent applications that can reason, interact with tools, and solve practical problemsI see software engineering as a continuous learning process, and I'm always looking to explore new technologies, I try to work on good ideas and value it a lot cause it is an idea and a pain point that makes creation to a good software and with Ai especially we can solve a lot of different problems before we couldnt which interest me a lot in this field but still the idea is the main things because without it Ai is also a Token generation enginei am excited to connect with people with intereset in the space of software and Ai technologies share with them the ideas and making something greater for us All

Education

National University of Computer and Emerging Sciences

Bachelor's Degree, Computer Science · (August 2025 - June 2029)
